

FIND IT · LINK IT · ANCHOR & ANNOTATE

Your Copywriters Weren't Hired to Annotate. They Were Hired to Create.

SecureCHEK AutoAnnotate™ automates MLR annotation prep, so your talent creates instead of chasing references.

Every MLR submission needs a clear path from each claim to its supporting evidence. That preparation is essential, but the manual work of finding claims, tracking down references and linking the two pulls skilled copywriters away from creative work. **SecureCHEK AI does the heavy lifting.**

SecureCHEK AI Automatically:

1

Identifies Claim

Identifies the claims in your content that require substantiation and locates the relevant supporting evidence.

2

Links Reference

Connects each claim to the correct supporting reference from your approved library.

3

Anchors and Annotates Evidence

Anchors the annotation to the exact supporting passage and captures a clear, traceable path from claim to evidence.

AutoAnnotate then generates a downloadable annotated PDF, ready for the team's final checks before MLR submission.

More creative time

Free copywriters from repetitive annotation so they create, not chase references.

Faster submission prep

Automate the claim identification, linking and preparation that slows agency workflows.

Clearer evidence trails

Give MLR reviewers a traceable path to every claim, with fewer avoidable rounds.
